

Demo

This document will guide you through the features of this project. To compile the code, simply run the command presented below in the terminal:

```
levishemtov@Levis-MacBook-Air CS246 Final % make
g++ -std=c++14 -Wall -MMD -Werror=vla -c -o main.o main.cc
g++ -std=c++14 -Wall -MMD -Werror=vla -c -o card.o card.cc
```

The executable “straights” has now been created in the directory. To run the program without a given seed (randomly generated seed used), enter the command shown below:

```
levishemtov@Levis-MacBook-Air CS246 Final % ./straights
Is Player1 a human (h) or a computer (c)?
>|
```

Conversely, if you wish to provide your own seed, enter it as a command line argument, as shown below:

```
levishemtov@Levis-MacBook-Air CS246 Final % ./straights 101
Is Player1 a human (h) or a computer (c)?
>|
```

The program now asks us if each Player (1-4) is a human or a computer. To set a given player to human, type ‘h’ and to set a player to computer, type ‘c’. If invalid input is given, the program will ask you to reenter the player type.

```
levishemtov@Levis-MacBook-Air CS246 Final % ./straights 101
Is Player1 a human (h) or a computer (c)?
>hc
You have provided an invalid player type: "hc", please try again:
>hello
You have provided an invalid player type: "hello", please try again:
>h
Is Player2 a human (h) or a computer (c)?
>computer
You have provided an invalid player type: "computer", please try again:
>human
You have provided an invalid player type: "human", please try again:
>c
Is Player3 a human (h) or a computer (c)?
>h
Is Player4 a human (h) or a computer (c)?
>c
```

To begin, we will have all players be human:

```
levishemtov@Levis-MacBook-Air CS246 Final % ./straights 101
Is Player1 a human (h) or a computer (c)?
>h
Is Player2 a human (h) or a computer (c)?
>h
Is Player3 a human (h) or a computer (c)?
>h
Is Player4 a human (h) or a computer (c)?
>h
```

Player1 was dealt the 7 of spades, and so they begin the game. If a different seed is used, it is likely a different player will be dealt 7S, and thus, they would begin the game instead of Player1

```
A new round begins. It's Player1's turn to play.
Cards on the table:
Clubs:
Diamonds:
Hearts:
Spades:
Your hand: 4S QS 2H 7S QH 4C JC 3D 6C 7H KC 2C 9C
Legal plays: 7S
>■
```

It should be noted that normally the 7H would be a legal play. However, on the first play of the game, the 7S is the only legal play. If Player1 attempts a non-legal move or provides invalid input, the program will respond in the follow ways:

If a card that is not a legal play is attempted to be played, whether it be the player's hand or not, the program prints out the following:

```
Your hand: 4S QS 2H 7S QH 4C JC 3D 6C 7H KC 2C 9C
Legal plays: 7S
>play 7H
This is not a legal play.
>play KC
This is not a legal play.
>play AC
This is not a legal play.
>■
```

If the player attempts to discard when they have one or more legal plays, the following will be printed out:

```
>discard 7S
You have a legal play. You may not discard.
>discard QH
You have a legal play. You may not discard.
>discard JS
You have a legal play. You may not discard.
>discard hello
You have a legal play. You may not discard.
>discard mycard
You have a legal play. You may not discard.
>■
```

If an invalid command is provided, such that it is not one of “play”, “discard”, “deck”, “quit”, and “ragequit”, the program print out the following:

```
Legal plays: 7S
>7S
You have provided an invalid command: 7S. Try again.
>hello
You have provided an invalid command: hello. Try again.
>|
```

As well, if a player wishes to see the cards dealt to each player, they need only type “deck” and it will show the 13 cards each player was dealt to begin the round, beginning with Player1, with each new line being the next player, so line 1 is Player1, line 2 is Player2 and so on.

```
Your hand: 4S QS 2H 7S QH 4C JC 3D 6C 7H KC 2C 9C
Legal plays: 7S
>deck
4S QS 2H 7S QH 4C JC 3D 6C 7H KC 2C 9C
5D 5S AH 8H JH 3S JD 5C 8S 9S 8C 9D 8D
6H AD 4H KS AS 6S AC 3H 2D TH 3C TC 2S
7C JS 5H TS 4D 6D QD TD 9H 7D KH QC KD
>|
```

As can be seen above, the top row lines up with Player1’s dealt hand. Player1 begins the game by playing the 7 of spades, and the turn now goes to Player2. As can be seen below, the 7 of spades has been recorded as being played on the table. The only legal play for Player2 is the 8 of spades. Once played, the table is displayed as follows:

```
Your hand: 5D 5S AH 8H JH 3S JD 5C 8S 9S 8C 9D 8D
Legal plays: 8S
>play 8S
Player2 plays 8S.
Cards on the table:
Clubs:
Diamonds:
Hearts:
Spades: 7 8
Your hand: 6H AD 4H KS AS 6S AC 3H 2D TH 3C TC 2S
Legal plays: 6S
>|
```

It is now Player3’s turn to play. To demonstrate “ragequit”, we will rage quit for Player3 below. We can expect to see a computer take over and play Player3’s turn. As the 6 of spades is the

only legal play, the cards on the table should be 6S, 7S, and 8S, as seen below.

```
Your hand: 6H AD 4H KS AS 6S AC 3H 2D TH 3C TC 2S
Legal plays: 6S
>ragequit
Player3 ragequits. A computer will now take over.
>Player3 plays 6S.
Cards on the table:
Clubs:
Diamonds:
Hearts:
Spades: 6 7 8
Your hand: 7C JS 5H TS 4D 6D QD TD 9H 7D KH QC KD
Legal plays: 7C 7D
>
```

I've played out the game, playing a legal play on each player's turn (not Player3 as they "ragequit"ed) until I reached a scenario where a player must discard. In this case, it is Player1.

```
Player4 plays 6D.
Cards on the table:
Clubs:
Diamonds: 6 7
Hearts: 6 7
Spades: 6 7 8 9
Your hand: 4S QS 2H QH 4C JC 3D 6C KC 2C 9C
Legal plays:
>
```

If Player1 attempts an invalid turn or provides invalid input, the program will respond in the following ways:

If the player attempts to play a card, the program will not allow this.

```
Your hand: 5H 4D QD TD KH QC KD
Legal plays:
>play 4D
This is not a legal play.
>play 5H
This is not a legal play.
>
```

If the player attempts to discard a card they do not have or one that does not exist, the program will not allow this:

```
Your hand: 4S QS 2H QH 4C JC 3D 6C KC 2C 9C
Legal plays:
>discard QD
This is not a legal play
>discard QA
This is not a legal play
>
```

Player2 and Player4 have both rage quit to more quickly demonstrate the other features of the game. We can see that the computers act as they are supposed to. When one or more legal plays exist, a computer will play the first card listed, as can be seen by Player2 and Player4. As

well, when no legal plays exist, a computer should discard the first card listed in their hand, which Player3 does.

```
Your hand: 5S AH 8H JH 3S JD 5C 8C 9D 8D
Legal plays: 5S 8H 5C 8C 8D
>Player2 plays 5S.
Cards on the table:
Clubs: 6 7
Diamonds: 5 6 7
Hearts: 6 7
Spades: 5 6 7 8 9
Your hand: 4H KS AS AC 3H 2D TH 3C TC 2S
Legal plays:
>Player3 discards 4H.
Cards on the table:
Clubs: 6 7
Diamonds: 5 6 7
Hearts: 6 7
Spades: 5 6 7 8 9
Your hand: JS 5H TS 4D QD TD 9H KH QC KD
Legal plays: 5H TS 4D
>Player4 plays 5H.
Cards on the table:
Clubs: 6 7
Diamonds: 5 6 7
Hearts: 5 6 7
Spades: 5 6 7 8 9
Your hand: 4S 2H QH 4C JC 3D KC 2C 9C
Legal plays: 4S
>
```

The round continues until all cards have been played out. As Player1 started the round and all players have the same number of cards, Player4 will play the final card before the round ends. When the round ends, the program states each player's discarded and then their associated discard sum. The first number in the summation represents the previous rounds' discard sum. For the first round, as there are no previous rounds, the first number is 0.

```
Cards on the table:
Clubs: 3 4 5 6 7 8 9 T J Q K
Diamonds: 2 3 4 5 6 7 8 9
Hearts: 5 6 7 8 9 T J Q K
Spades: A 2 3 4 5 6 7 8 9 T J
Your hand: KD
Legal plays:
>Player4 discards KD.
Player1's discards: QS 2H 2C
Player1's score: 0 + 12 + 2 + 2 = 16
Player2's discards: AH JD
Player2's score: 0 + 1 + 11 = 12
Player3's discards: AD 4H KS AC 3H
Player3's score: 0 + 1 + 4 + 13 + 1 + 3 = 22
Player4's discards: QD TD KD
Player4's score: 0 + 12 + 10 + 13 = 35
A new round begins. It's Player1's turn to play.
```

After the scores are printed, because no discard sum is greater than 80, a new round begins. Player1 is again dealt the 7S and so they start the new round. Using the “deck” command, we

can see the deck has been shuffled from the previous round (compared to the initial “deck” command output).

```
A new round begins. It's Player1's turn to play.
Cards on the table:
Clubs:
Diamonds:
Hearts:
Spades:
Your hand: TS QC AD QD TC 7S KC AH 4C AC 9C QS 6C
Legal plays: 7S
>deck

JH 4D 6H 3H 3C 5H 8C QH TD 9H 3D 8S 5C
6S 5D KS KD 7C 6D 4S 4H 5S TH 2H 7H JS
JC KH AS 7D 8H 3S 9D 9S 2D JD 2S 2C 8D
>
```

The game continues similarly to last round, so we will “ragequit” Player1, and as all players are now computers, the game will complete itself instantaneously. Looking at the screenshot below, we see that Player3 started the round with a score of 59. Now, at the end of the final round, Player3 has a score of 119. As this is greater than the 80 score threshold, the game ends. The program then finds the player(s) with the lowest score and states that player is the winner.

```
Cards on the table:
Clubs: 4 5 6 7 8 9 T
Diamonds: 7 8 9 T J Q K
Hearts: 5 6 7 8 9 T
Spades: A 2 3 4 5 6 7 8 9 T J Q
Your hand: 3H
Legal plays:
>Player4 discards 3H.
Player1's discards: 2C 5D QC
Player1's score: 40 + 2 + 5 + 12 = 59
Player2's discards: 3C 4H 2H 3D 2D AH QH
Player2's score: 35 + 3 + 4 + 2 + 3 + 2 + 1 + 12 = 62
Player3's discards: 6D JH JC KS 4D AD AC KH
Player3's score: 59 + 6 + 11 + 11 + 13 + 4 + 1 + 1 + 13 = 119
Player4's discards: KC 3H
Player4's score: 48 + 13 + 3 = 64
Player1 wins!
levishemtov@Levis-MacBook-Air CS246 Final %
```

To show a game where multiple players win (tie for lowest score), I will be running the program using only computers, with a seed of 40.

```
levishemtov@Levis-MacBook-Air CS246 Final % ./straights 40
Is Player1 a human (h) or a computer (c)?
>c
Is Player2 a human (h) or a computer (c)?
>c
Is Player3 a human (h) or a computer (c)?
>c
Is Player4 a human (h) or a computer (c)?
>c
```

We can see that at the end of this game, both Player1 and Player4 have the same discard sum of 29 when Player3 goes over the 80 score threshold. Thus, both players win and the program prints as such.

```

Cards on the table:
Clubs: 7 8 9 T
Diamonds: 2 3 4 5 6 7 8 9 T J Q K
Hearts: 3 4 5 6 7 8 9 T J
Spades: A 2 3 4 5 6 7 8 9 T J
Your hand: KH
Legal plays:
>Player3 discards KH.
Player1's discards: 6C AH 2C KS
Player1's score: 7 + 6 + 1 + 2 + 13 = 29
Player2's discards:
Player2's score: 49 = 49
Player3's discards: QC 2H JC QH AD KC 5C 3C KH
Player3's score: 22 + 12 + 2 + 11 + 12 + 1 + 13 + 5 + 3 + 13 = 94
Player4's discards: QS AC 4C
Player4's score: 12 + 12 + 1 + 4 = 29
Player1 wins!
Player4 wins!
levishemtov@Levis-MacBook-Air CS246 Final %

```

Finally, to demonstrate the functionality of the quit function, a new game has been created and the four players are humans. Now, when the “quit” command is used on anyone’s turn, the game immediately terminates.

```

levishemtov@Levis-MacBook-Air CS246 Final % ./straights 101
Is Player1 a human (h) or a computer (c)?
>h
Is Player2 a human (h) or a computer (c)?
>h
Is Player3 a human (h) or a computer (c)?
>h
Is Player4 a human (h) or a computer (c)?
>h
A new round begins. It's Player1's turn to play.
Cards on the table:
Clubs:
Diamonds:
Hearts:
Spades:
Your hand: 4S QS 2H 7S QH 4C JC 3D 6C 7H KC 2C 9C
Legal plays: 7S
>quit
levishemtov@Levis-MacBook-Air CS246 Final %

```

As well, the “quit” command works when initializing the players:

```

Is Player1 a human (h) or a computer (c)?
>h
Is Player2 a human (h) or a computer (c)?
>c
Is Player3 a human (h) or a computer (c)?
>h
Is Player4 a human (h) or a computer (c)?
>quit
levishemtov@Levis-MacBook-Air CS246 Final %

```

Valgrind screenshot with no memory leaks:

```
Legal plays:
>Player3 discards KH.
Player1's discards: KD
Player1's score: 52 + 13 = 65
Player2's discards: 2D QD
Player2's score: 44 + 2 + 12 = 58
Player3's discards: 4H 3D AH QH KH
Player3's score: 75 + 4 + 3 + 1 + 12 + 13 = 108
Player4's discards: JH JD 2H AD 3H
Player4's score: 79 + 11 + 11 + 2 + 1 + 3 = 107
Player2 wins!
